The world is under your feet

PRODUCT PARAMETERS

Outdoor camping compass, beautiful style, small and portable, suitable for hiking, camping and outdoor activities.

Name:	Gold Exquisite Flip Compass
Item number:	G50
Color:	Gold
Weight:	45g
Material:	Copper, acrylic mirror
Packing:	Color box
Packing:	24pcs/medium box, 240pcs/carton

Box gauge:	36*20.5*38cm
------------	--------------

Features

1. Fluorescent design: When the compass is exposed to sunlight/light, the outer dial and hands will glow. Useful for positioning in dark environments. The longer the exposure time, the longer the glow lasts.
2. Built-in damping oil, better stability, adapt to various environments.
3. The compass scale is clear, the size is small and easy to carry, the copper shell is durable and the product is well-made, showing the grade.

COMPACT & COVENIENT

Know north day or night
Never get lost again

Notice

The luminous effect means that the fluorescent powder can only appear after being irradiated by natural light, sunlight, ultraviolet light, etc. The longer the continuous irradiation time and the higher the intensity, the longer the luminous display will be.

There is no luminous effect without irradiation.

Notice :

The luminous effect means that the fluorescent powder can only appear after being irradiated by natural light, sunlight, ultraviolet light, etc.

The longer the continuous irradiation time and the higher the intensity, the longer the luminous display will be.

There is no luminous effect
without irradiation.

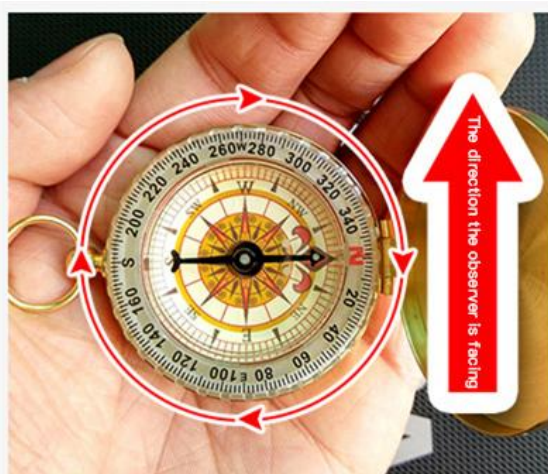

Taking the observer as an example, the direction the observer faces during the adjustment process remains the same, only the compass is adjusted to find out which direction the observer is facing.

The steps are as follows:

1

Place the compass horizontally on the palm of your hand, and when the needle is stationary, the arrow points to north.

2

At this time, the orientation marked on the bottom dial is the actual geographic orientation.

Only then can the correct reading direction be obtained. Let's zoom in to see... ↓

3

Turn the compass slowly until the arrow coincides with the "N" on the bottom dial.

E S W N

So the direction the observer is facing is W

The world is under your feet
